### **Homework #3 Answers**

#### **Multiple Choice:**

- 3) b) Type I Hypervisor
- 4) e) Client Hyper-V
- 5) b) Type II
- 6) e) Apple Boot Camp
- 13) c) Licensing of guest OS

#### **Essay Quiz:**

- 4) You would not run OS X in a virtual machine on a Windows Computer as it is illegal to do so unless you can acquire a license to use OS X (currently unavailable).
- 5) To do a comparison between Windows XP mode and Windows XP on a virtual machine you should use two different computers and ensure they both meet the minimum requirements for each OS, backup your hard drives, and remove conflicting software.

#### **Key Terms Quiz:**

- 6) In the 1960s, a/an dumb terminal was the very simple interface device to a mainframe computer.
- 7) In the 1990s, people often used terminal client software on a PC to connect to a specialized server or minicomputer.

8) A/an thin client is a low-cost PC, usually without such common peripherals such as expansion slots, and optical drives, and is used to allow a user to connect and work in a server-hosted environment.
